

For adults who, along with diet and exercise, need help lowering their bad cholesterol (LDL-C).

Ready to ask your doctor about treating bad cholesterol with LEQVIO®?

LDL-C, low-density lipoprotein cholesterol.
Actor portrayal.

IMPORTANT SAFETY INFORMATION

Do not use if you have had an allergic reaction to LEQVIO (inclisiran) or any of its ingredients.

Serious allergic reactions can occur. Seek medical help right away if you have difficulty breathing or swallowing; swelling of the face, lips, tongue or throat; dizziness and feel faint; decrease in blood pressure; severe skin itching, with a red rash or raised bumps.

What is LEQVIO?

LEQVIO is an injectable prescription medicine used along with diet and exercise to reduce low-density lipoprotein (LDL-C) or “bad” cholesterol in adults with high blood cholesterol levels called hypercholesterolemia (including a type of high cholesterol called heterozygous familial hypercholesterolemia [HeFH]).

Please see additional Important Safety Information on [page 4](#) and click for LEQVIO full [Prescribing Information](#).

*LEQVIO lowered bad cholesterol more during each 6-month dosing interval than placebo (a substance without medication).

Cholesterol and your health: Steps to consider

Actor portrayals.

Understanding the connection between bad cholesterol (LDL-C) and heart disease

A common type of heart disease is called atherosclerotic cardiovascular disease, or ASCVD. It is caused by consistent high levels of bad cholesterol in the blood that can lead to the buildup of plaque in your arteries.

Plaque buildup can cause serious problems, like:

- Heart attack
- Stroke
- Blockages within arteries, causing chest pain

It is not known if LEQVIO[®] can decrease problems related to high levels of bad cholesterol, such as heart attacks or stroke.

Start by knowing your bad cholesterol number

A recommended goal for bad cholesterol is less than 70 mg/dL for people who have heart disease, and in some people, below 55 mg/dL.

LDL-C target
less than
70 mg/dL

Talk to your doctor about what your goal should be.

Consider some lifestyle changes for healthier living

It can be hard to lower your bad cholesterol number. But there are changes you can make for a healthier lifestyle.

- ✓ Eating less red meat and fried foods
- ✓ Eating more fruits and vegetables
- ✓ Being more active
- ✓ Smoking less or not at all
- ✓ Avoiding drinking alcohol in excess

Talk with your doctor before making lifestyle changes.

LEQVIO[®] (inclisiran) can help cut bad cholesterol in half

LEQVIO
lowers bad
cholesterol by
50% and helps
keep it low*

*At Month 17, LEQVIO lowered bad cholesterol and kept it lower with 2 doses a year compared to statins alone.

Based on a clinical study of adults with known heart disease who were on a statin and needed help lowering bad cholesterol (LDL-C).

Clinical study information

These results are based on a study in which 1561 adult patients with ASCVD were on a maximally tolerated statin with or without another cholesterol-lowering treatment—in addition to LEQVIO (781 adults) or a placebo (780 adults). Cholesterol levels were measured at the start of the study and compared with cholesterol levels 17 months later. Sixty percent of the patients were 65 years or older. LEQVIO was also studied in a similar clinical trial of 1617 adults with similar results.

“LEQVIO significantly lowered my bad cholesterol.”

LEQVIO can help you reach your
bad cholesterol goal

In a clinical study

8 out of **10**

adults taking LEQVIO + a statin achieved the recommended bad cholesterol goal of less than 70 mg/dL vs 2 out of 10 adults taking a statin + placebo at 17 months

WHAT ARE THE MOST COMMON SIDE EFFECTS?

The most common side effect was injection site reaction, which was experienced by 8% of adults taking LEQVIO vs 2% with placebo. Injection site reaction included pain, redness, and rash. Other side effects included joint pain and chest cold.

Uniquely designed to help lower bad cholesterol

Actor portrayals.

Here's how LEQVIO[®] works with your liver's natural process

Your liver works to naturally remove bad cholesterol from the blood.

But, sometimes, certain proteins can disrupt your liver's hard work and allow bad cholesterol to build up in your blood.

LEQVIO is the only cholesterol medicine that stops those certain proteins from being made.

LEQVIO is expected to leave your bloodstream within 48 hours of receiving your dose. However, it continues to work with your liver's natural process to lower your bad cholesterol.*

*In a study where 31 adults were given a single dose of LEQVIO each, levels of LEQVIO could not be detected in blood after 48 hours.

Watch this video to find out more about how LEQVIO works in your body.
